

NIST AI RMF · ISO/IEC 42001 · OWASP LLM Top 10

# AI risk governance, built for the way your organization actually **ships AI**.

Obiguard inspects every prompt, response, and tool-call across your stack — enforces policy, blocks exfiltration, and gives security & legal a single ledger of evidence.

■ *Enforced at the gateway layer, before the model sees the prompt*

FRAMEWORKS MAPPED

**0**

RETRAINING REQUIRED

# The platform, not the pitch deck.

## LLM Providers Supported

40+

OpenAI, Anthropic, Bedrock, Azure OpenAI, Vertex AI, and more — one gateway in front of all of them.

## Guardrail Detectors

13+

PII, jailbreak, toxicity, profanity, and ban-list detection, running at the gateway layer today.

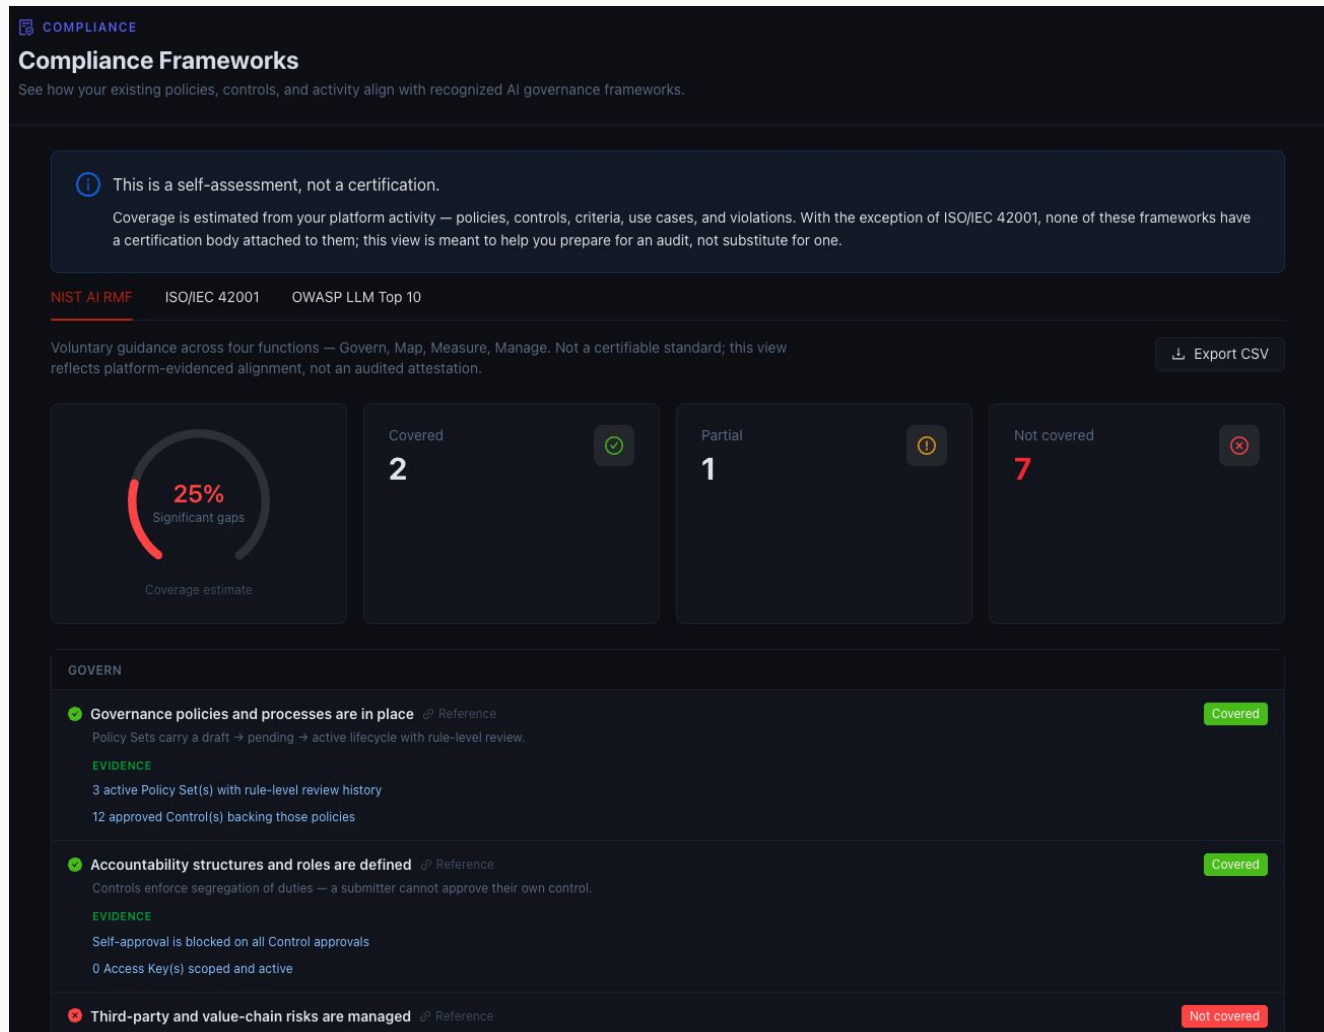

## Retraining Required

0

Runs at the gateway layer. We don't touch your weights, your data, or your training pipeline.

**MDEC-recognised.** Obiguard holds MSC Malaysia status, awarded by the Malaysia Digital Economy Corporation.

## 3 FRAMEWORKS MAPPED — LIVE IN THE PRODUCT

*Actual Compliance Frameworks view: coverage estimated automatically from your policies, controls, and violations — mapped to NIST AI RMF, ISO/IEC 42001, and OWASP LLM Top 10.*

# A live view from a customer's production project.

3 violations fired in the past minute.

2 routed to the Review Queue.

1 blocked by a Policy Set.

All written to the Audit Log — searchable, exportable, and evidence-ready.

# Six capabilities. One platform.

Obiguard wraps every AI agent your organization operates — monitoring usage, enforcing policy, routing violations for human review, and maintaining the audit trail your compliance team needs.

01

**MONITOR**

## Dashboard & Violations

A live project dashboard shows usage, cost, errors, threats blocked, and latency.

02

**REVIEW**

## Human-in-the-Loop Queue

Violations flagged for judgment land in the Review Queue — assign, annotate, resolve.

03

**ENFORCE**

## Policy Sets

Group enforcement rules into Policy Sets and assign them to AI Agents.

04

**REGISTER**

## AI Use Cases & Agents

A living registry of every AI Use Case and Agent — governance follows the workload.

05

**LOG**

## Audit Log

Every prompt, response, tool-call, and decision is written to an exportable Audit Log.

06

**GOVERN**

## Controls & Criteria

Map Controls to NIST AI RMF, ISO/IEC 42001, or OWASP LLM Top 10 — continuously.

## Built for the whole room — not just the AI team.

### FOR SECURITY

**Make every AI agent a governed workload.**

- Violations dashboard with real-time threats blocked
- Policy Sets block or flag unsafe agent behavior
- Audit Log exports to CSV for your SIEM or GRC pipeline

*For CISOs & security platform teams*

### FOR RISK & LEGAL

**Continuous evidence, not quarterly screenshots.**

- Controls mapped to NIST AI RMF, ISO 42001, OWASP LLM Top 10
- Audit Log — every decision timestamped
- Export as evidence for internal AUP audits and self-assessment

*For Risk, Legal & Compliance*

### FOR AI TEAMS

**Register, govern, and iterate on your AI agents.**

- AI Use Case & Agent registry — one source of truth
- Policy Sets assign enforcement rules per agent
- Review Queue routes edge cases to human judgment

*For AI product & platform teams*

## YOUR NETWORK · ON-PREMISE / PRIVATE VPC DEPLOYMENT

# Common questions.

Don't see what you're looking for? Our solutions engineers respond within one business day.

**01**

## **Does Obiguard see our customers' data?**

In SaaS mode, content is processed in-memory to make a policy decision — only the decision and metadata are persisted to the Audit Log. Private and on-prem options are available.

**02**

## **Does this add latency to model calls?**

Inspection runs on the request path, so it adds some latency — how much depends on which detectors are enabled for your policy.

**03**

## **How is Obiguard different from a model gateway?**

Gateways route traffic. Obiguard governs it — adding policy enforcement, violation tracking, review workflow, and audit trail.

**04**

## **Which compliance frameworks do you support?**

NIST AI RMF, ISO/IEC 42001, and the OWASP LLM Top 10 today, as a self-assessment aid — plus your internal AUP.

# Bring the same rigor you apply to data and identity — to the AI in your stack.

A 20-minute call with a solutions engineer is enough to scope your pilot. Most customers are enforcing policy in production within two weeks.
